ENIPAY

GLOBAL PAYMENTS AGGREGATION PLATFORM

ECOSYSTEM OVERVIEW

ENI public chain, in collaboration with top-tier institutions from multiple countries, has jointly launched the next-generation global digital payment platform — ENIPAY.

The project is headquartered in Tokyo, Japan, and built on a blockchain-based, modular, and enterprise-grade settlement architecture to create a future-ready payment network. It not only serves human users but also natively supports AI Agent participation in transactions and payments, pioneering a new economic era of “**Machine-to-Machine On-chain Payments**”.

At the same time, ENIPAY is building a dedicated DApp ecosystem, with all participants deeply integrated into the entire on-chain value stream. Through tokenomics and incentive mechanisms, ENI token serves as the settlement asset, creating a highly efficient and low-cost value circulation model, unlocking long-term growth potential.

With ENIPAY as the core, we are further perfecting the overall platform value structure and building a closed-loop value ecosystem.

ENI + BSC DUAL-CHAIN ENGINE, FULL-STACK ACCELERATION

ENIPAY builds a stablecoin account system, on-chain settlement, and real-world spending scenarios, achieving a seamless and permissionless connection between digital assets and global payments — unlocking true liquidity, usability, and value growth.

02

EPAY Ecosystem Highlights

01

Capture the early-entry upside of the ENI public chain, securing a clear first-mover advantage

02

Global payment use cases continue to go live, with real-world adoption steadily expanding

03

ENI + BSC dual-chain architecture enhances overall liquidity and efficiency

04

EPAY employs a continuous token-burn and deflationary mechanism, steadily reducing circulating supply

05

The model features built-in viral growth and yield mechanisms, enabling sustained scalable growth

06

Ecosystem utility and demand growth drive long-term value creation and transaction flow

03

EPAY Investment Plan

Operating Chains:

Built on ENI + BSC
Dual-Chain Architecture

Investment Amount:

300 USDT ~ 10,000 USDT

Multiple Top-Ups Supported,

Per-account investment cap:
10,000 USDT

04

Earnings Structure

Pledged Earnings:

0.8%~1.2% daily (based on ENIPAY Platform VISA card transaction cashback rate) distributed reasonably, with internal test period maintained at around 1%.

Payout Cap:

Total earnings capped at 3.5x payout.

Recommended Earnings:

Up to 100 generations of recommended earnings.

Direct Referrals	Earnable Generations	Reward Ratio
Refer 1	Generation 1	5%
Refer 2	Generation 2	6%
Refer 3	Generation 3	7%
Refer 4	Generation 4	8%
Refer 5	Generation 5	9%
Refer 6	Generation 6	10%
Refer 7	Generation 7 – 20	3% per generation
Refer 8	Generation 21 – 30	2% per generation
Refer 9	Generation 31 – 100	0.5% per generation

05

Team Expansion & Earnings Example

Example: You refer 9 people, the team expands to the 6th generation, and the following illustrates the earnings when each person contributes 300U

Assumptions

-  You directly refer 9 people
-  Each person continues to refer 9 people
-  Calculated through Gen 6
-  Each person contributes 300U
-  Dynamic reward rate (according to the rules on Page 4)

- Gen 1: 5%
- Gen 2: 6%
- Gen 3: 7%
- Gen 4: 8%
- Gen 5: 9%
- Gen 6: 10%

Total Team Members from Gen 1 to Gen 6

597,870

$$9 + 81 + 729 + 6,561 + 59,049 + 531,441 = 597,870$$

Generation	Number of People	Team Contribution Amount (300U / person)	Daily Static Yield (1%) (Generated by the Team)	Dynamic Reward Rate (according to the rules on Page 4)	Your Daily Dynamic Earnings
Gen 1	9	2,700U	27U	5%	1.35U
Gen 2	81	24,300U	243U	6%	14.58U
Gen 3	729	218,700U	2,187U	7%	153.09U
Gen 4	6,561	1,968,300U	19,683U	8%	1,574.64U
Gen 5	59,049	17,714,700U	177,147U	9%	15,943.23U
Gen 6	531,441	159,432,300U	1,594,323U	10%	159,432.30U
Total (Gen 1-6)	597,870	179,361,000U	1,793,610U	—	177,119.19U

Your Static Yield (based only on your own 300U)

Daily static yield = 300U × daily yield rate

0.8%	1%	1.2%
2.4U/day	3U/day	3.6U/day

Calculated at 1%: about 3U/day

Your Team Dynamic Earnings (Total from Gen 1-6)

Daily dynamic earnings = Team daily static yield × corresponding rate

177,119.19U / day

≈ 177.12K U / day

The above is a mathematical model example, assuming that all members at each level complete a 300U contribution and satisfy the corresponding referral and reward conditions; actual earnings shall be subject to platform rules, valid performance, settlement conditions, and system data.

06

Reward Settlement Overview

Settlement Rules:

90% USDT & 5% ENI & 5% EPAY

Withdrawal Rules:

Minimum withdrawal: 20U,
one withdrawal per day

5% Withdrawal Fee:

The smart contract automatically buys
back EPAY and sends it to the burn address

07

ENI Initial Listing Price: 20 USDT

ENI Token Will Be Officially Listed on Major Leading Exchanges in Late 2026

Initial listings will include Binance, OKX, Gate, Bybit, Coinbase, Bitget, HTX, MEXC, KuCoin, and a total of 45 major mainstream digital asset exchanges worldwide.

45+

EPAY has a total supply of 100 million tokens, adopting a unidirectional cashflow mechanism (only supports buy-out, no buyback), and is designed to enhance deflationary attributes and value support at the base layer.

ALLOCATION STRUCTURE

- **80%** Liquidity Pool → Blackhole Lock (Permanent Burn)
- **10%** Community Building
- **5%** Capital Reserve
- **5%** Foundation (Ecosystem Development)
